Class	50501500	Vitamin supplements
Definition (if available)	Vitamin supplements are used to ensure that adequate amounts of nutrients are obtained on a daily basis, if optimal amounts cannot be obtained through a varied diet.	

Commodity	Commodity Title	Definition	Synonym
50501501	Vitamin A supplement	Vitamin supplements are used to ensure that adequate amounts of nutrients are obtained on a daily basis, if optimal amounts cannot be obtained through a varied diet. Vitamin A is a group of nutritionally unsaturated hydrocarbons that includes retinol, retinal, retinoic acid, and several provitamin A carotenoids including beta-carotene.	
50501502	Vitamin B1 supplement	Vitamin supplements are used to ensure that adequate amounts of nutrients are obtained on a daily basis, if optimal amounts cannot be obtained through a varied diet. Vitamin B1 (or thiamine or thiamin) is a water-soluble vitamin of the B complex. Its phosphate derivatives are involved in many cellular processes.	
50501503	Vitamin B2 supplement	Vitamin supplements are used to ensure that adequate amounts of nutrients are obtained on a daily basis, if optimal amounts cannot be obtained through a varied diet. Vitamin B2 (or riboflavin) plays a key role in energy metabolism, and for the metabolism of fats, ketone bodies, carbohydrates, and proteins.	
50501504	Vitamin B3 supplement	Vitamin supplements are used to ensure that adequate amounts of nutrients are obtained on a daily basis, if optimal amounts cannot be obtained through a varied diet. Vitamin B3 (or niacin or nicotinic acid) is one of the essential human nutrients.	
50501505	Vitamin B5 supplement	Vitamin supplements are used to ensure that adequate amounts of nutrients are obtained on a daily basis, if optimal amounts cannot be obtained through a varied diet. Vitamin B5 (or pantothenic acid or pantothenate) an essential nutrient required to synthesize coenzyme-A, as well as to synthesize and metabolize proteins, carbohydrates, and fats.	
50501506	Vitamin B6 supplement	Vitamin supplements are used to ensure that adequate amounts of nutrients are obtained on a daily basis, if optimal amounts cannot be obtained through a varied diet. Several forms of the vitamin B6 are known, but pyridoxal phosphate is the active form and is a cofactor in many reactions of amino acid metabolism, including transamination, deamination, and decarboxylation. It is also necessary for the enzymatic reaction governing the release of glucose from glycogen.	
50501507	Vitamin B7 supplement	Vitamin supplements are used to ensure that adequate amounts of nutrients are obtained on a daily basis, if optimal amounts cannot be obtained through a varied diet. Vitamin B7 (or Biotin or vitamin H or coenzyme R) a coenzyme for carboxylase enzymes, involved in the synthesis of fatty acids, isoleucine, and valine, and in gluconeogenesis.	
50501508	Vitamin B9 supplement	Vitamin supplements are used to ensure that adequate amounts of nutrients are obtained on a daily basis, if optimal amounts cannot be obtained through a varied diet. Vitamin B9 (or Folic acid, folate, vitamin M, vitamin Bc, folacin, pteroyl-L-glutamic acid, and pteroyl-L-glutamate) are forms of the water-soluble vitamin B9. The human body needs folate to synthesize and repair DNA, as well as for other functions.

50501509	Vitamin B12 supplement	Vitamin supplements are used to ensure that adequate amounts of nutrients are obtained on a daily basis, if optimal amounts cannot be obtained through a varied diet. Vitamin B12 (or cobalamin) is used by the human body for DNA synthesis and regulation, and also fatty acid synthesis and energy production.	
50501510	Vitamin C supplement	Vitamin supplements are used to ensure that adequate amounts of nutrients are obtained on a daily basis, if optimal amounts cannot be obtained through a varied diet. Vitamin C (or L-ascorbic acid, or ascorbate (the anion of ascorbic acid)) is an essential nutrient for humans and certain other animal species. Vitamin C refers to a number of vitamers that have vitamin C activity in animals, including ascorbic acid and its salts, and some oxidized forms of the molecule like dehydroascorbic acid.	
50501511	Vitamin D supplement	Vitamin supplements are used to ensure that adequate amounts of nutrients are obtained on a daily basis, if optimal amounts cannot be obtained through a varied diet. Vitamin D is a group of fat-soluble secosteroids responsible for enhancing intestinal absorption of calcium and phosphate. In humans, the most important compounds in this group are vitamin D3 (also known as cholecalciferol) and vitamin D2 (ergocalciferol).	
50501512	Vitamin E supplement	Vitamin supplements are used to ensure that adequate amounts of nutrients are obtained on a daily basis, if optimal amounts cannot be obtained through a varied diet. Vitamin E refers to a group of eight fat-soluble compounds that include both tocopherols and tocotrienols.	
50501513	Vitamin K supplement	Vitamin supplements are used to ensure that adequate amounts of nutrients are obtained on a daily basis, if optimal amounts cannot be obtained through a varied diet. Vitamin K is a group of structurally similar, fat-soluble vitamins (2-methyl-1,4-naphthoquinone (3-) derivatives) that the human body needs for posttranslational modification of certain proteins required for blood coagulation, and in metabolic pathways in bone and other tissue.	
50501514	Choline	This classification denotes a water-soluble vitamin with the molecular formula C5H14NO, a preparation that US FDA recognizes as an active ingredient or moiety under Unique Ingredient Identifier N91BDP6H0X, chemically known as 2-hydroxy-n,n,n-trimethylethanaminium but more generally known as choline, which bears U.S. National Institutes of Health Compound Identifier 305. The European Medicines Agency schedules Choline in its eXtended EudraVigilance Medicinal Product Dictionary or XEVMPD under Index SUB13349MIG. CHOLINE is scheduled in the U.S. International Trade Commission's Harmonized Tariff System (HTS) Pharmaceutical Appendix. SMILES: OCC[N](C)(C)C

50501515	Retinol	This classification denotes a fat-soluble vitamin with the molecular formula C20H30O, a preparation that US FDA recognizes as an active ingredient or moiety under Unique Ingredient Identifier G2SH0XKK91, chemically known as 3,7-dimethyl-9-(2,6,6-trimethyl-1-cyclohexenyl)-nona-2,4,6,8-tetraen-1-ol but more generally known as retinol, which bears U.S. National Institutes of Health Compound Identifier 1071. The European Medicines Agency schedules Retinol in its eXtended EudraVigilance Medicinal Product Dictionary or XEVMPD under Index SUB10292MIG. The term RETINOL is an International Non-Proprietary Name or INN (see World Health Organization INN reference publication, Volume 22, No. 10, 1968, List 8). The World Health Organization schedules retinol in its Anatomical Therapeutic Chemical (ATC) Classification. RETINOL is scheduled in the U.S. International Trade Commission's Harmonized Tariff System (HTS) Pharmaceutical Appendix. SMILES: OC/C=C(/C=C/C=C(/C=C/C1=C(CCCC1(C)C)C)C)C.	
50501516	Ergocalciferol	This classification denotes a vitamin d with the molecular formula C28H44O, a preparation that US FDA recognizes as an active ingredient or moiety under Unique Ingredient Identifier VS041H42XC, chemically known as 9,10-secoergosta-5,7,10(19),22-tetraen-3-ol, (3beta,5z,7e,22e)- but more generally known as ergocalciferol, which bears U.S. National Institutes of Health Compound Identifier 5280793. European Medicines Agency schedules Ergocalciferol in its eXtended EudraVigilance Medicinal Product Dictionary or XEVMPD under Index SUB06596MIG. The term ERGOCALCIFEROL is an International Non-Proprietary Name. World Health Organization schedules ergocalciferol in its Anatomical Therapeutic Chemical (ATC) Classification and its WHO-DD or Drug Dictionary. ERGOCALCIFEROL is scheduled in the U.S. International Trade Commission's Harmonized Tariff System (HTS) Pharmaceutical Appendix.	维生素D2; ергокалциферол; ergocalciférol; ergocalciferol; εργοκαλσιφερόλη; ergokalciferol; ergocalciferolo; ergokalcyferol; ergocalciferol; ergocalciferol
50501517	Betacarotene	This classification denotes a vitamin d with the molecular formula C28H44O, a preparation that US FDA recognizes as an active ingredient or moiety under Unique Ingredient Identifier VS041H42XC, chemically known as 9,10-secoergosta-5,7,10(19),22-tetraen-3-ol, (3beta,5z,7e,22e)- but more generally known as ergocalciferol, which bears U.S. National Institutes of Health Compound Identifier 5280793. European Medicines Agency schedules Ergocalciferol in its eXtended EudraVigilance Medicinal Product Dictionary or XEVMPD under Index SUB06596MIG. The term ERGOCALCIFEROL is an International Non-Proprietary Name. 50501518	Dexpanthenol	This classification denotes a vitamin with the molecular formula C9H19NO4, a preparation that US FDA recognizes as an active ingredient or moiety under Unique Ingredient Identifier 1O6C93RI7Z, chemically known as 2,4-dihydroxy-n-(3-hydroxypropyl)-3,3-dimethylbutyramide, d-(+)- but more generally known as dexpanthenol, which bears U.S. National Institutes of Health Compound Identifier 4678. European Medicines Agency schedules Dexpanthenol in its eXtended EudraVigilance Medicinal Product Dictionary or XEVMPD under Index SUB07042MIG. The term DEXPANTHENOL is an International Non-Proprietary Name or INN (see World Health Organization INN reference publication, Volume 19 1975, List 5). World Health Organization schedules dexpanthenol in its Anatomical Therapeutic Chemical (ATC) Classification and its WHO-DD or Drug Dictionary. DEXPANTHENOL is scheduled in the U.S. International Trade Commission's Harmonized Tariff System (HTS) Pharmaceutical Appendix.	泛醇; пантенол; panthénol; panthenol; πανθενόλη; pantenol; pantenolo; pantenol; pantenol; pantenol
50501519	Doxercalciferol	This classification denotes a vitamin d analog with the molecular formula C28H44O2, a preparation that US FDA recognizes as an active ingredient or moiety under Unique Ingredient Identifier 3DIZ9LF5Y9, chemically known as vitamin d2, 1alpha-hydroxy- but more generally known as doxercalciferol, which bears U.S. National Institutes of Health Compound Identifier 5281107. European Medicines Agency schedules Doxercalciferol in its eXtended EudraVigilance Medicinal Product Dictionary or XEVMPD under Index SUB01826MIG. The term DOXERCALCIFEROL is an International Non-Proprietary Name or INN (see World Health Organization INN reference publication, Volume 14, No. 3, 2000, List 44). World Health Organization schedules doxercalciferol in its Anatomical Therapeutic Chemical (ATC) Classification and its WHO-DD or Drug Dictionary.	доксеркалциферол; doxercalciférol; doxercalciferol; δοξερκαλσιφερόλη; doxerkalciferol; doxercalciferolo; dokserkalcyferol; doxercalciferol; doxercalciferol
50501520	Biotin	This classification denotes a b vitamin with the molecular formula C10H16N2O3S, a preparation that US FDA recognizes as an active ingredient or moiety under Unique Ingredient Identifier 6SO6U10H04, chemically known as 2-keto-3,4-imidazolido-2-tetrahydrothiophene-n-valeric acid but more generally known as biotin, which bears U.S. National Institutes of Health Compound Identifier 253. Biotin comes in many forms, including including base, amide, disulfide n-hydroxysuccinimide, hydrazide, methyl ester, peo iodoacetamide, polyethyleneoxide iodoacetamide, sulfone, sulfoxide, 3-sulfo-n-hydroxysuccinimide ester, and 4-amidobenzoic acid. European Medicines Agency schedules Biotin in its eXtended EudraVigilance Medicinal Product Dictionary or XEVMPD under Index SUB05841MIG. The term BIOTIN is an International Non-Proprietary Name or INN (see World Health Organization INN reference publication, Volume 15 No. 1, 2001, List 45). 50501521	Diosmin	This classification denotes a bioflavonoid with the molecular formula C28H32O15, a preparation that US FDA recognizes as an active ingredient or moiety under Unique Ingredient Identifier 7QM776WJ5N, chemically known as 4h-1-benzopyran-4-one, 7-((6-o-(6-deoxy-alpha-l-mannopyranosyl)-beta-d-glucopyranosyl)oxy)-5-hydroxy-2-(3-hydroxy-4-methoxyphenyl)- but more generally known as diosmin, which bears U.S. National Institutes of Health Compound Identifier 5281613. European Medicines Agency schedules Diosmin in its eXtended EudraVigilance Medicinal Product Dictionary or XEVMPD under Index SUB07198MIG. The term DIOSMIN is an International Non-Proprietary Name or INN (see World Health Organization INN reference publication, Volume 14, No. 1, 2000, List 43). World Health Organization schedules diosmin in its Anatomical Therapeutic Chemical (ATC) Classification and its WHO-DD or Drug Dictionary. DIOSMIN is scheduled in the U.S. International Trade Commission's Harmonized Tariff System (HTS) Pharmaceutical Appendix.	地奥司明; диосмин; diosmine; diosmin; διοσμίνη; diozmin; diosmina; diosmina; diosmina; diosmina
50501522	Paricalcitol	This classification denotes a vitamin d analog, a preparation that US FDA recognizes as an active ingredient or moiety under Unique Ingredient Identifier 6702D36OG5. European Medicines Agency schedules Paricalcitol in its eXtended EudraVigilance Medicinal Product Dictionary or XEVMPD under Index SUB09627MIG. Paricalcitol generally arises in the molecular formula C27H44O3. The term PARICALCITOL is an International Non-Proprietary Name or INN (see World Health Organization INN reference publication, volume 12 no. 2 1999, list 40.) PARICALCITOL is scheduled in the U.S. International Trade Commission's Harmonized Tariff System (HTS) Pharmaceutical Appendix.	парикалцитол; paricalcitol; paricalcitol; παρικαλκιτόλη; parikalcitol; paricalcitolo; parikalcytol; paricalcitol; paricalcitol
50501523	Pyridoxal phosphate	This classification denotes a b vitamin with the molecular formula C8H10NO6P.H2O, a preparation that US FDA recognizes as an active ingredient or moiety under Unique Ingredient Identifier 5V5IOJ8338, chemically known as 4-pyridinecarboxaldehyde, 3-hydroxy-2-methyl-5-((phosphonooxy)methyl)- but more generally known as pyridoxal phosphate, which bears U.S. National Institutes of Health Compound Identifier 1051. European Medicines Agency schedules Pyridoxal phosphate in its eXtended EudraVigilance Medicinal Product Dictionary or XEVMPD under Index SUB04137MIG. World Health Organization schedules pyridoxal phosphate in its Anatomical Therapeutic Chemical (ATC) Classification and its WHO-DD or Drug Dictionary.	

Class 50501600 Nutritional mineral supplements

Definition (if available): Mineral supplements are used to ensure that adequate amounts of nutrients are obtained on a daily basis, if optimal amounts cannot be obtained through a varied diet. Dietary minerals are the chemical elements required by humans, other than the four elements carbon, hydrogen, nitrogen, and oxygen present in common organic molecules.

Commodity	Commodity Title	Definition	Synonym
50501601	Nutritional calcium supplement	Mineral supplements are used to ensure that adequate amounts of nutrients are obtained on a daily basis, if optimal amounts cannot be obtained through a varied diet. Calcium is needed for muscle, heart and digestive system health, builds bone, supports synthesis and function of blood cells.

50501602	Nutritional copper supplement	Mineral supplements are used to ensure that adequate amounts of nutrients are obtained on a daily basis, if optimal amounts cannot be obtained through a varied diet. Copper is required component of many redox enzymes, including cytochrome c oxidase.	
50501603	Nutritional fluoride supplement	Mineral supplements are used to ensure that adequate amounts of nutrients are obtained on a daily basis, if optimal amounts cannot be obtained through a varied diet. Dietary fluoride supplements in the form of tablets, lozenges, or liquids (including fluoride-vitamin preparations) are used primarily for children in areas without fluoridated drinking water. The supplements prevent cavities in permanent teeth.	
50501604	Nutritional iodine supplement	Mineral supplements are used to ensure that adequate amounts of nutrients are obtained on a daily basis, if optimal amounts cannot be obtained through a varied diet. Iodine is required for the synthesis of thyroid hormones, thyroxine and triiodothyronine and to prevent goiter, and also for mammary and salivary glands and for gastric mucosa and immune system (thymus).	
50501605	Nutritional iron supplement	Mineral supplements are used to ensure that adequate amounts of nutrients are obtained on a daily basis, if optimal amounts cannot be obtained through a varied diet. Iron is required for many proteins and enzymes, notably hemoglobin to prevent anemia.	
50501606	Nutritional magnesium supplement	Mineral supplements are used to ensure that adequate amounts of nutrients are obtained on a daily basis, if optimal amounts cannot be obtained through a varied diet. Magnesium is required for processing ATP and for bones.	
50501607	Nutritional manganese supplement	Mineral supplements are used to ensure that adequate amounts of nutrients are obtained on a daily basis, if optimal amounts cannot be obtained through a varied diet. Manganese is a cofactor in enzyme functions.	
50501608	Nutritional molybdenum supplement	Mineral supplements are used to ensure that adequate amounts of nutrients are obtained on a daily basis, if optimal amounts cannot be obtained through a varied diet. Molybdenum is the oxidases xanthine oxidase, aldehyde oxidase, and sulfite oxidase.	
50501609	Nutritional phosphorus supplement	Mineral supplements are used to ensure that adequate amounts of nutrients are obtained on a daily basis, if optimal amounts cannot be obtained through a varied diet. Phosphorus is a component of bones, cells, in energy processing and many other functions.	
50501610	Nutritional potassium supplement	Mineral supplements are used to ensure that adequate amounts of nutrients are obtained on a daily basis, if optimal amounts cannot be obtained through a varied diet. Potassium is a systemic electrolyte and is essential in coregulating ATP with sodium.	
50501611	Nutritional selenium supplement	Mineral supplements are used to ensure that adequate amounts of nutrients are obtained on a daily basis, if optimal amounts cannot be obtained through a varied diet. Selenium is a cofactor essential to activity of antioxidant enzymes like glutathione peroxidase.	
50501612	Nutritional sodium supplement	Mineral supplements are used to ensure that adequate amounts of nutrients are obtained on a daily basis, if optimal amounts cannot be obtained through a varied diet. Sodium is a systemic electrolyte and is essential in coregulating ATP with potassium.

50501613	Nutritional zinc supplement	Mineral supplements are used to ensure that adequate amounts of nutrients are obtained on a daily basis, if optimal amounts cannot be obtained through a varied diet. Zinc is pervasive and required for several enzymes such as carboxypeptidase, liver alcohol dehydrogenase, and carbonic anhydrase.	

Class 50501700 Macro nutrient supplements

Definition (if available): Nutritional supplements are used to ensure that adequate amounts of nutrients are obtained on a daily basis, if optimal amounts cannot be obtained through a varied diet. Whereas vitamins and minerals are required in only trace amounts, this Class contains dietary fiber, fatty acids, amino acids, and other substances consumed in macro levels. This category is intended for nutritional supplements designed and marketed in dosage form (typically tablets, capsules, prepared drinks and drink mixes (powders)) for the ultimate consumer.

Commodity	Commodity Title	Definition	Synonym
50501701	Amino acid nutritional supplement	Nutritional supplements are used to ensure that adequate amounts of nutrients are obtained on a daily basis, if optimal amounts cannot be obtained through a varied diet. Essential amino acids cannot be synthesized natively by humans and therefore must be supplied in the diet. Essential amino acides include Histidine, Isoleucine, Leucine, Lysine, Methionine, Phenylalanine, Threonine, Tryptophan and Valine. Nonessential amino acids include Alanine, Arginine, Aspartic acid, Cysteine, Glutamic acid, Glutamine, Glycine, Proline, Serine, Tyrosine, Asparagine and Selenocysteine.	
50501702	Complete meal replacement drink or mix	Meal replacement generally refers to a calorie-controlled, prepackaged product in the form of a bar or beverage (ready to drink or powder) that replaces a regular meal. Meal-replacement products usually provide limited calories per serving, are fortified with vitamins and minerals, and often bear nutrient content claims such as percent of calories from fat or sugar.	
50501703	Nutritional protein supplement	Protein supplements are dietary supplements commonly used by those involved in bodybuilding and athletics. Protein supplements come in various forms: ready to drink shakes, bars, bites, oats, gels and powders. Typical ingredients include whey, casein, soy and egg white.	
50501704	Omega 3 fatty acid supplement	Nutritional supplements are used to ensure that adequate amounts of nutrients are obtained on a daily basis, if optimal amounts cannot be obtained through a varied diet. Omega-3 fatty acids are polyunsaturated fatty acids and are considered essential fatty acids, meaning that they cannot be synthesized by the human body. Omega-3 fatty acids refers to a group of three fats called ALA, EPA and DHA.	
50501705	Omega 6 fatty acid supplement	Nutritional supplements are used to ensure that adequate amounts of nutrients are obtained on a daily basis, if optimal amounts cannot be obtained through a varied diet. Omega-6 fatty acids are a family of unsaturated fatty acids that have in common a final carbon–carbon double bond in the n-6 position. Certain Omega-6 fatty acids are considered essential fatty acids, meaning that they cannot be synthesized by the human body.

50501706	Dietary fiber supplement	Nutritional supplements are used to ensure that adequate amounts of nutrients are obtained on a daily basis, if optimal amounts cannot be obtained through a varied diet. Dietary fiber is the edible part of plants or analogous carbohydrates that is resistant to digestion and absorption in the human small intestine, with complete or partial fermentation in the large intestine. Dietary fiber includes polysaccharides, oligosaccharides, lignin, and associated plant substances. Dietary fibers promote beneficial physiologic effects including laxation.	
50501707	Glutamine	This classification denotes a non-essential amino acid and dietary amino acid with the molecular formula C5H10N2O3, a preparation that US FDA recognizes as an active ingredient or moiety under Unique Ingredient Identifier 0RH81L854J, chemically known as 2,5-diamino-5-oxopentanoic acid but more generally known as glutamine, which bears U.S. NIH Compound Identifier 738. European Medicines Agency schedules Glutamine in its eXtended EudraVigilance Medicinal Product Dictionary or XEVMPD under Index SUB23331. World Health Organization schedules glutamine in its Anatomical Therapeutic Chemical (ATC) Classification and its WHO-DD or Drug Dictionary.	GLN

Class 50501800 Combination nutritional supplements

Definition (if available): A dietary or nutritional supplement is intended to provide nutrients that may otherwise not be consumed in sufficient quantities through a varied diet. Supplements are generally understood to include vitamins, minerals, fiber, fatty acids, or amino acids, and other substances. This Class is intended for products containing two or more different nutritional elements in combination.

Commodity	Commodity Title	Definition	Synonym
50501801	Multi vitamin supplement	Nutritional supplements are used to ensure that adequate amounts of nutrients are obtained on a daily basis, if optimal amounts cannot be obtained through a varied diet. Mulitvitamins usually include a mineral supplement. A multivitamin/mineral supplement is defined in the United States as a supplement containing 3 or more vitamins and minerals where each vitamin and mineral is included at a dose below the tolerable upper level.	
50501802	Multi mineral nutritional supplement	Nutritional supplements are used to ensure that adequate amounts of nutrients are obtained on a daily basis, if optimal amounts cannot be obtained through a varied diet. This supplement contains two or more minerals each at recommended dosage levels.	
50501803	Combination fatty acid nutritional supplement	Nutritional supplements are used to ensure that adequate amounts of nutrients are obtained on a daily basis, if optimal amounts cannot be obtained through a varied diet. This commodity is intended for nutritional supplements containing two or more fatty acids, including essential amino acids.	
50501804	Combination vitamin and mineral nutritional supplement	Nutritional supplements are used to ensure that adequate amounts of nutrients are obtained on a daily basis, if optimal amounts cannot be obtained through a varied diet. This commodity is intended for nutritional supplements containing two or more vitamins and minerals in combination..

50501805	Sodium monofluorophosphate	This classification denotes a nutritional supplement with the molecular formula FO3P.2Na, a preparation that US FDA recognizes as an active ingredient or moiety under Unique Ingredient Identifier C810JCZ56Q, chemically known as phosphorofluoridic acid, sodium salt but more generally known as sodium monofluorophosphate, which bears U.S. NIH Compound Identifier 24266. European Medicines Agency schedules Sodium monofluorophosphate in its eXtended EudraVigilance Medicinal Product Dictionary or XEVMPD under Index SUB33441. World Health Organization schedules sodium monofluorophosphate in its Anatomical Therapeutic Chemical (ATC) Classification and its WHO-DD or Drug Dictionary.	Na2PFO3

Class 50501900 Veterinary nutritional supplements

Definition (if available): Products to provide nutrients for animals which may be required as a supplement to standard feed.

Commodity	Commodity Title	Definition	Synonym
50501901	Mineral salt lick	A block of salt enriched with minerals, licked by animals to supplement their diet.	
50501902	Veterinary multinutrient block	Block that provides micro-organisms rich in sources of nutrients for animals.	
50501903	Veterinary vitamin	A compound providing vital nutrients that an animal requires.	
50501904	Veterinary vitamin and mineral mixture	A mixture of vitamins and minerals which provides nutrients for animals, often premixed into feed.	

Family 50520000 Non GMO fresh fruits

Class 50521500 Non GMO apples

Definition (if available): The type of non GMO fruit known as non GMO apples. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.

Commodity	Commodity Title	Definition	Synonym
50521501	Non GMO akane apples	The variety of non GMO apples known as non GMO akane apples. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). 50521502	Non GMO ambrosia apples	The variety of non GMO apples known as non GMO ambrosia apples. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521503	Non GMO api apples	The variety of non GMO apples known as non GMO api apples. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521504	Non GMO baldwin apples	The variety of non GMO apples known as non GMO baldwin apples. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521505	Non GMO braeburn apples	The variety of non GMO apples known as non GMO braeburn apples. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521506	Non GMO bramley apples	The variety of non GMO apples known as non GMO bramley apples. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.

50521507	Non GMO bramley seedling apples	The variety of non GMO apples known as non GMO bramley seedling apples. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521508	Non GMO calville blanche d'hiver apples	The variety of non GMO apples known as non GMO calville blanche d'hiver apples. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521509	Non GMO cameo apples	The variety of non GMO apples known as non GMO cameo apples. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521510	Non GMO charles ross apples	The variety of non GMO apples known as non GMO charles ross apples. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521511	Non GMO codlin apples	The variety of non GMO apples known as non GMO codlin apples. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). 50521512	Non GMO cortland apples	The variety of non GMO apples known as non GMO cortland apples. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521513	Non GMO costard apples	The variety of non GMO apples known as non GMO costard apples. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521514	Non GMO court pendu plat apples	The variety of non GMO apples known as non GMO court pendu plat apples. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521515	Non GMO cox's orange pippin apples	The variety of non GMO apples known as non GMO cox's orange pippin apples. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521516	Non GMO crab apples	The variety of non GMO apples known as non GMO crab apples. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. 50521517	Non GMO crispin apples	The variety of non GMO apples known as non GMO crispin apples. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521518	Non GMO delicious apples	The variety of non GMO apples known as non GMO delicious apples. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521519	Non GMO duchess apples	The variety of non GMO apples known as non GMO duchess apples. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521520	Non GMO earligold apples	The variety of non GMO apples known as non GMO earligold apples. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521521	Non GMO early mcintosh apples	The variety of non GMO apples known as non GMO early mcintosh apples. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521523	Non GMO empire apples	The variety of non GMO apples known as non GMO empire apples. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521524	Non GMO flower of kent apples	The variety of non GMO apples known as non GMO flower of kent apples. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521525	Non GMO fuji apples	The variety of non GMO apples known as non GMO fuji apples. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521526	Non GMO gala apples	The variety of non GMO apples known as non GMO gala apples. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.

50521527	Non GMO gascoyne's scarlet apples	The variety of non GMO apples known as non GMO gas non GMOcoyne's scarlet apples. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521528	Non GMO giliflower apples	The variety of non GMO apples known as non GMO giliflower apples. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521529	Non GMO ginger gold apples	The variety of non GMO apples known as non GMO ginger gold apples. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521530	Non GMO gladstone apples	The variety of non GMO apples known as non GMO gladstone apples. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521531	Non GMO gloster apples	The variety of non GMO apples known as non GMO gloster apples. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.

This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521533	Non GMO golden delicious apples	The variety of non GMO apples known as non GMO golden delicious apples. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521534	Non GMO golden noble apples	The variety of non GMO apples known as non GMO golden noble apples. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521535	Non GMO granny smith apples	The variety of non GMO apples known as non GMO granny smith apples. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521536	Non GMO gravenstein apples	The variety of non GMO apples known as non GMO gravenstein apples. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521538	Non GMO greensleeves apples	The variety of non GMO apples known as non GMO greensleeves apples. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521539	Non GMO honeycrisp apples	The variety of non GMO apples known as non GMO honeycrisp apples. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521540	Non GMO howgate wonder apples	The variety of non GMO apples known as non GMO howgate wonder apples. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521541	Non GMO ida red apples	The variety of non GMO apples known as non GMO ida red apples. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521543	Non GMO jersey mac apples	The variety of non GMO apples known as non GMO jersey mac apples. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521544	Non GMO jester apples	The variety of non GMO apples known as non GMO jester apples. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521545	Non GMO jonagold apples	The variety of non GMO apples known as non GMO jonagold apples. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521546	Non GMO jonamac apples	The variety of non GMO apples known as non GMO jonamac apples. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521548	Non GMO katy apples	The variety of non GMO apples known as non GMO katy apples. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521549	Non GMO kidd's orange red apples	The variety of non GMO apples known as non GMO kidd's orange red apples. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521550	Non GMO lady apples	The variety of non GMO apples known as non GMO lady apples. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521551	Non GMO law rome apples	The variety of non GMO apples known as non GMO law rome apples. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. 50521582	Non GMO stark crimson apples	The variety of non GMO apples known as non GMO stark crimson apples. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521583	Non GMO starking apples	The variety of non GMO apples known as non GMO starking apples. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521584	Non GMO stayman apples	The variety of non GMO apples known as non GMO stayman apples. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521585	Non GMO stayman winesap apples	The variety of non GMO apples known as non GMO stayman winesap apples. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521586	Non GMO summer rambo apples	The variety of non GMO apples known as non GMO summer rambo apples. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.

50521587	Non GMO tsugaru apples	The variety of non GMO apples known as non GMO tsugaru apples. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521588	Non GMO twenty ounce apples	The variety of non GMO apples known as non GMO twenty ounce apples. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521589	Non GMO tydeman red apples	The variety of non GMO apples known as non GMO tydeman red apples. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521590	Non GMO vistabella apples	The variety of non GMO apples known as non GMO vistabella apples. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521591	Non GMO wealthy apples	The variety of non GMO apples known as non GMO wealthy apples. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.

50521592	Non GMO white joaneting apples	The variety of non GMO apples known as non GMO white joaneting apples. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521593	Non GMO white transparent apples	The variety of non GMO apples known as non GMO white transparent apples. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521594	Non GMO winesap apples	The variety of non GMO apples known as non GMO winesap apples. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521595	Non GMO worcester apples	The variety of non GMO apples known as non GMO worcester apples. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521596	Non GMO york imperial apples	The variety of non GMO apples known as non GMO york imperial apples. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.

	50521600	Non GMO apricots

Definition (if available): The type of non GMO fruit known as non GMO apricots. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.

50521601	Non GMO ambercot apricots	The variety of non GMO apricots known as non GMO ambercot apricots. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521602	Non GMO apache apricots	The variety of non GMO apricots known as non GMO apache apricots. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521603	Non GMO birttany gold apricots	The variety of non GMO apricots known as non GMO birttany gold apricots. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521604	Non GMO black apricots	The variety of non GMO apricots known as non GMO black apricots. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.

50521605	Non GMO blenheim apricots	The variety of non GMO apricots known as non GMO blenheim apricots. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521606	Non GMO bonny apricots	The variety of non GMO apricots known as non GMO bonny apricots. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521607	Non GMO bulida apricots	The variety of non GMO apricots known as non GMO bulida apricots. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521608	Non GMO castlebrite apricots	The variety of non GMO apricots known as non GMO castlebrite apricots. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521609	Non GMO clutha gold apricots	The variety of non GMO apricots known as non GMO clutha gold apricots. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.

50521610	Non GMO cluthasun apricots	The variety of non GMO apricots known as non GMO clutha sun apricots. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521611	Non GMO darby royal apricots	The variety of non GMO apricots known as non GMO darby royal apricots. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521612	Non GMO dina apricots	The variety of non GMO apricots known as non GMO dina apricots. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521613	Non GMO earlicot apricots	The variety of non GMO apricots known as non GMO earlicot apricots. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521614	Non GMO earliman apricots	The variety of non GMO apricots known as non GMO earliman apricots. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.

50521615	Non GMO early bright apricots	The variety of non GMO apricots known as non GMO early bright apricots. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521616	Non GMO flaming gold apricots	The variety of non GMO apricots known as non GMO flaming gold apricots. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521617	Non GMO fresno apricots	The variety of non GMO apricots known as non GMO fresno apricots. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521618	Non GMO gold brite apricots	The variety of non GMO apricots known as non GMO gold brite apricots. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521619	Non GMO goldbar apricots	The variety of non GMO apricots known as non GMO goldbar apricots. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.

50521620	Non GMO golden sweet apricots	The variety of non GMO apricots known as non GMO golden sweet apricots. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521621	Non GMO goldrich apricots	The variety of non GMO apricots known as non GMO goldrich apricots. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521622	Non GMO helena apricots	The variety of non GMO apricots known as non GMO helena apricots. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521623	Non GMO honeycot apricots	The variety of non GMO apricots known as non GMO honeycot apricots. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521624	Non GMO imperial apricots	The variety of non GMO apricots known as non GMO imperial apricots. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.

50521625	Non GMO jordanne apricots	The variety of non GMO apricots known as non GMO jordanne apricots. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521626	Non GMO jumbo cot apricots	The variety of non GMO apricots known as non GMO jumbo cot apricots. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521627	Non GMO kandy kot apricots	The variety of non GMO apricots known as non GMO kandy kot apricots. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521628	Non GMO katy apricots	The variety of non GMO apricots known as non GMO katy apricots. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521629	Non GMO king apricots	The variety of non GMO apricots known as non GMO king apricots. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.

50521630	Non GMO lambertin apricots	The variety of non GMO apricots known as non GMO lambertin apricots. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521631	Non GMO lorna apricots	The variety of non GMO apricots known as non GMO lorna apricots. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521632	Non GMO lulu belle apricots	The variety of non GMO apricots known as non GMO lulu belle apricots. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521633	Non GMO modesto apricots	The variety of non GMO apricots known as non GMO modesto apricots. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521634	Non GMO moorpark apricots	The variety of non GMO apricots known as non GMO moorpark apricots. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.

50521635	Non GMO orangered apricots	The variety of non GMO apricots known as non GMO orangered apricots. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521636	Non GMO palstein apricots	The variety of non GMO apricots known as non GMO palstein apricots. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521637	Non GMO patterson apricots	The variety of non GMO apricots known as non GMO patterson apricots. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521638	Non GMO perfection apricots	The variety of non GMO apricots known as non GMO perfection apricots. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521639	Non GMO poppy apricots	The variety of non GMO apricots known as non GMO poppy apricots. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.

50521640	Non GMO poppycot apricots	The variety of non GMO apricots known as non GMO poppycot apricots. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521641	Non GMO queen apricots	The variety of non GMO apricots known as non GMO queen apricots. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521642	Non GMO riland apricots	The variety of non GMO apricots known as non GMO riland apricots. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521643	Non GMO rival apricots	The variety of non GMO apricots known as non GMO rival apricots. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521644	Non GMO robada apricots	The variety of non GMO apricots known as non GMO robada apricots. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.

This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521705	Non GMO dominico bananas	The variety of non GMO bananas known as non GMO dominico bananas. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521706	Non GMO green bananas	The variety of non GMO bananas known as non GMO green bananas. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521707	Non GMO gros michel bananas	The variety of non GMO bananas known as non GMO gros michel bananas. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50521708	Non GMO lacatan bananas	The variety of non GMO bananas known as non GMO lacatan bananas. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50522011	Non GMO nectarberries	The variety of non GMO blackberries known as non GMO nectarberries. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50522012	Non GMO olallie blackberries	The variety of non GMO blackberries known as non GMO olallie blackberries. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50522013	Non GMO tayberries	The variety of non GMO blackberries known as non GMO tayberries. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.

50522014	Non GMO thornless hull blackberries	The variety of non GMO blackberries known as non GMO thornless hull blackberries. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50522015	Non GMO youngberries	The variety of non GMO blackberries known as non GMO youngberries. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	

Class 50522100 Non GMO billberries

Definition (if available): The type of non GMO fruit known as non GMO billberries. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.

Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50522516	Non GMO duke cherries	The variety of non GMO cherries known as non GMO duke cherries. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.

50522517	Non GMO early rivers cherries	The variety of non GMO cherries known as non GMO early rivers cherries. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50522518	Non GMO ruby bing cherries	The variety of non GMO cherries known as non GMO ruby bing cherries. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50522519	Non GMO santina cherries	The variety of non GMO cherries known as non GMO santina cherries. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50522520	Non GMO geans/guines cherries	The variety of non GMO cherries known as non GMO geans/guines cherries. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50522521	Non GMO sonata cherries	The variety of non GMO cherries known as non GMO sonata cherries. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.

50522522	Non GMO lambert cherries	The variety of non GMO cherries known as non GMO lambert cherries. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50522523	Non GMO stella cherries	The variety of non GMO cherries known as non GMO stella cherries. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50522524	Non GMO sweetheart cherries	The variety of non GMO cherries known as non GMO sweetheart cherries. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50522525	Non GMO tartarian cherries	The variety of non GMO cherries known as non GMO tartarian cherries. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50522526	Non GMO maraschino cherries	The variety of non GMO cherries known as non GMO maraschino cherries. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.

50522527	Non GMO van cherries	The variety of non GMO cherries known as non GMO van cherries. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.	
50522528	Non GMO morello cherries	The variety of non GMO cherries known as non GMO morello cherries. This means that they are produced without the use of methods that genetically modify organisms by means that are not possible under natural conditions. Such methods include cell fusion, microencapsulation and macro-encapsulation, and recombinant DNA technology (including gene deletion, gene doubling, introducing a foreign gene, and changing the positions of genes when achieved by recombinant DNA technology). Traditional methods of breeding, conjugation, fermentation, hybridization, in vitro fertilization, or tissue culture are considered to be non-GMO.
