- Customized Requisition UI: Program Data Collection

Notification Center

- In order to better manage SIGLUS user's daily work, the notification center is designed as a new feature based on openLMIS v3. It will help all level's user to get notification of status update for requisition/report/order/POD.
- The notification center includes two visual cues: The red notification icon is designed for managing the works from supervised facilities; The blue notification center is designed for managing the tasks in my facility.

Please note this is not the final version, there could be potential changes based on requirements.

Partial Fulfillment

- Partial fulfillment function is designed to solve the issue that sometimes the warehouse face when it doesn't have enough stock for some products, and the warehouse clerk needs to fulfill the order for part of the ordered products right now and leave the rest products as a new order and fulfill them later.
- Sub-orders will be created with the order status with “Partially Fulfilled” and the order number of the order will have a suffix to let user know how many times the order has been split.

The non-fully fulfilled products will be moved to the sub-order. As we can see in the picture, the suffix -2 of order number means it is the second order of the original requisition.

Customized UI Requisition

- To collect different data for different kinds of reports, customized sections for the requisition template is designed as an enhancement for template configuration.
- By choosing different sections within the program and set the details for each section, the requisition of the program will be customized for specific levels of facility.
 - Consultation number section
 - KIT usage data section
 - Product section
 - Usage information for each product section
 - Regimen section
 - Patient section
 - Test consumption section

Please note this is not the final version, there could be potential changes based on requirements.

By checking the needed section, a preview of the selected section will display, and the admin can click “setting” to the detailed setting the configuration of the selected section. This configuration columns page will show the preview of the configured template and allow admin to confirm what the template will look like.

Different sections make up a customized UI requisition. For example, the ARV report, the Malaria report, and the Rapid Test report.

By setting the template as “report only” in period configuration, the customized UI requisition without product section don’t need to transfer to an order, it can be used to collect different data from facilities.

Please note this is not the final version, there could be potential changes based on requirements.
