

Health Commodity Management Information System (HCMIS)

A Comprehensive Solution for Managing Ethiopia's Health Supply Chain

HCMIS is an enterprise-level software solution, built to manage Ethiopia's health commodity supply chain. First developed in 2009, the system is now used in all pharmaceutical warehouses and over 500 health facilities, with the potential to serve all facilities as Internet connectivity becomes available.

Who is using the HCMIS?

VACCINE MANAGEMENT

- ☒ Vaccine logistics data
- ☒ Cold chain data
- ☒ Remote temperature monitors

HCMIS INCREASES EFFICIENCY

With HCMIS, the time to complete a requisition form for ordering and reporting was reduced from **2 days** to **90 minutes**.

HCMIS IMPROVES DATA VISIBILITY

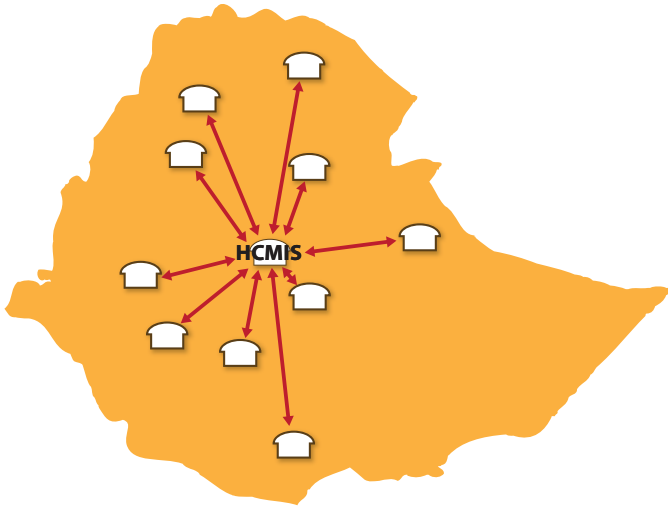

Web-based dashboards and reports enable managers to monitor stock and logistics data from all PFSA locations.

• Stock data

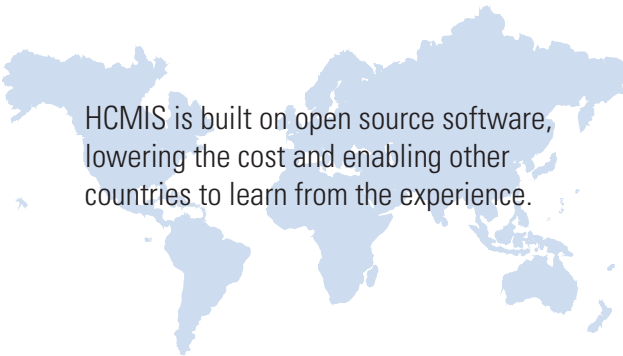

• Demand data

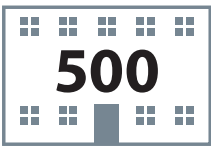

LOCALLY DEVELOPED WORLD CLASS SOFTWARE

HCMIS was developed by locally in Ethiopia, meeting the specific needs of the country's health system.

HCMIS is built on open source software, lowering the cost and enabling other countries to learn from the experience.

A help desk supports the more than 500 locations currently using HCMIS.
