

OpenLMIS and Health Information Systems

OpenLMIS is a state-of-the-art, open source, web-enabled, enterprise class eLMIS solution.

ONE System

Deployment of a stand-alone logistics management information system like OpenLMIS is considered a best practice in enterprise health information systems architecture.

Through interoperability, OpenLMIS can "talk" to other health information systems like DHIS2, Sage, etc.

At the facility level, data can be entered from paper or digital form, wherever a computer or tablet is available.

Stockouts

With Manual Logistics Systems

With OpenLMIS

Stockout rates for all product goods dropped from 32% to 23%³

Frequency of stockouts greater than 7 days dropped from 24% to 15%³

With Manual Logistics Systems **Timeliness** With OpenLMIS
